1

Learning Objectives

- Understand the basic concept of Sustainable Development (SD), the environmental, social and economic dimensions.
- Know the idea of Sustainable Development
- Be able to discuss the conflicts which are involved in the SD concept on the national as well as on the global scale.
- Be familiar with potential strategic options for SD (efficiency, sufficiency).
- Be able to discuss the (dis-)advantages of instruments for SD.
- Understand the SD challenge for companies, their responsibility and their potentials for action.

General Introduction

Sustainable Development (SD) is defined as "development that meets the needs of the present without compromising the ability of future generations to meet their own needs" (Brundtland Report 1987). More specific sustainable development goals (SDGs) have been formulated by the UN in 2015. The most critical resources for the survival of future generations are climate stability and biodiversity. Therefore, we have to respect the planetary boundaries of economic activity today. However, today many people are still far from being able to meet their basic needs, especially in developing countries. SD not only addresses the question of inter-generational justice but also this intra-generational issue: How to improve the life of the poor without overburdening the ecosystems? This is a challenge for individual lifestyles (especially in rich nations), for companies and for government policy. The lecture provides a basic understanding of these challenges, introduces strategies and instruments for sustainable development.

Contents

- ✚ Different Concepts of Development
- ✚ Development beyond Growth
- ✚ Introduction and History: Brundtland, Rio, SDGs
- ✚ Basic Concepts, Strategies and Measurement
- ✚ Efficiency and Innovation, Green Growth and Rebound 4 Sufficiency, Income and Labor, Consumption Patterns and Lifestyles 5 Poverty and Inequality
- ✚ Instruments for SD
- ✚ Community and SD
- ✚ Climate Change
- ✚ Biodiversity
